Individual Report - Group 13

Szymon Chirowski

Question 1

Feedback for Szymon

- Szymon

Question 2

Feedback for Mohammadali

- Mohammadali, you consistently participate actively in meetings and discussions. You communicate clearly and regularly propose new tasks. Your work, whether it is code review or implementing new features, is always completed before the deadline. One area for improvement could be adding more detailed cards and descriptions to the Trello board to enhance task traceability and team overview.

Question 3

Feedback for Hristiyan

- Hristiyan, you demonstrate excellent teamwork and are highly engaged during meetings and in team chats, even outside scheduled hours. You complete all your tasks well ahead of deadlines and actively seek feedback to improve. Your technical proficiency exceeds current course requirements, and you work very independently. To further improve team coordination, I suggest you document your work more consistently on Trello by adding clear task cards and descriptions. So far, your verbal and chat updates have helped keep things on track.

Question 4

Feedback for Aristotelis

- Aristotelis, your engagement in the project has been limited so far. You rarely participate in meetings or team discussions and have not shown initiative in group settings. Your contributions have primarily involved AI generated content, which you present as your own without demonstrating a clear understanding. As of June 4th, none of your assigned tasks have been submitted, despite past deadlines.

  Outside of standups, you have not taken part in discussions or collaborative work during DataLab sessions, which makes it difficult to work as a team or offer support if needed. You also have not used Trello effectively. Your tasks are not updated, and in one instance, you moved an incomplete task to Done without submitting any work or seeking team validation. Additionally, the one card you created did not match the work you later presented.

  To contribute more effectively, I encourage you to engage more during team meetings and work sessions, ensure your tasks are clearly tracked and updated in Trello, and only submit work that you fully understand and can explain.

Hristiyan Georgiev

Question 1

Feedback for Szymon

- He does the job. Focused and working. Sometimes a bit too much but we balance it out. Overall an amazing teammate

Question 2

Feedback for Mohammadali

- Overal there. A bit on the background and waiting for instructions. But does work once given a task

Question 3

Feedback for Hristiyan

- Cool personality.

Question 4

Feedback for Aristotelis

- No comment at this point

Mohammadali Jaberi

Question 1

Feedback for Szymon

- Szymon made a strong effort to divide the tasks fairly among team members. He and I were jointly responsible for developing the models for our data, and I believe he performed his role with great competence and attention to detail.

  In addition to modeling, Szymon also carried out the Exploratory Data Analysis (EDA). After receiving feedback from both Hristiyan and me, he revised the analysis accordingly. His responsiveness to feedback and willingness to improve the work based on team discussions were highly valuable.

  Overall, Szymon was a very effective team member. His initiative in organizing the workload and promoting collaboration contributed significantly to the efficiency and success of our project.

Question 2

Feedback for Mohammadali

Question 3

Feedback for Hristiyan

- Hristiyan's primary role in our project was data engineering, and he performed exceptionally well in this responsibility. Initially, our focus was on a specific stock market dataset, but we later decided to shift to a different market. Fortunately, Hristiyan was able to re-engineer the data pipeline for the new dataset within a single day. This quick turnaround was highly beneficial, as it allowed the rest of the team sufficient time to develop and implement a variety of models on the newly structured data.

  Additionally, Hristiyan was consistently supportive and collaborative. Whenever I had questions regarding specific columns or data attributes, he took the time to explain their significance and guided me in designing more effective features for our models. His contributions greatly enhanced the overall quality and efficiency of our data preparation process.

Question 4

Feedback for Aristotelis

- He worked on certain aspects of the project, including elements related to UI/UX design. However, he encountered difficulty in clearly explaining his work and making it understandable to the rest of the team. This lack of clarity affected our ability to fully integrate his contributions into the broader project workflow.

  I hope that in the upcoming block, he will become more actively involved and improve his communication so that his work can be more effectively aligned with the team's objectives.
